KAIST AI Future Studies

chpark11111023@gmail.com

<https://chpark1111.github.io/>

Research interests: AI Safety / AI Governance · IP Law & Legal Technology · Finance

Research Profile

I am Chanhyeok Park, a graduate student in the integrated M.S.–Ph.D. program at KAIST AI Future Studies, where I work under the guidance of Prof. Woojung Jon. I earned my bachelor’s degree from the KAIST School of Computing. Alongside my academic work, I am Co-Founder and CTO of **IP Intelligence**.

My research centers on **AI safety**, which I approach through two complementary directions.

In **legal research**, I study AI governance and regulation, including frameworks such as the EU AI Act. I examine how risk-based regulation, legal accountability, and institutional oversight should be designed to prevent harm and protect fundamental rights throughout AI development and deployment.

In **technical research**, I explore how large language models (LLMs) and agentic AI can be trained, evaluated, and deployed safely. My interests include safety alignment, adversarial testing, and safeguards against harmful outputs and unintended agent actions.

Education

KAIST AI Future Studies

Sep. 2026 – Present

Integrated M.S.–Ph.D. Program in AI Future Studies

Advisor: Prof. Woojung Jon · GPA: 4.18/4.3

KAIST School of Computing

Mar. 2020 – Feb. 2025

B.S. in Computer Science (CS) and Intellectual Property (IP)

GPA: 4.02/4.3 (*Summa Cum Laude*)

Publications

- BoxSplitGen: A Generative Model for 3D Part Bounding Boxes in Varying Granularity
Juil Koo*, Wei-Tung Lin*, Chanhoo Park, **Chanhyeok Park**, Minhyuk Sung (* Equal contribution)
IEEE/CVF Winter Conference on Applications of Computer Vision (WACV), 2026
- A Study on the Protection of AI-Generated Works – Focusing on the Degree of Human Involvement
Chanhyeok Park, Woojung Jon
Copyright Quarterly, Vol. 37, No. 4 (Issue 148), Winter 2024
- Split, Merge, and Refine: Fitting Tight Bounding Boxes via Over-Segmentation and Iterative Search
Chanhyeok Park, Minhyuk Sung
International Conference on 3D Vision (3DV), 2024

Experience

Co-Founder and CTO, IP Intelligence

Present

Legal AI researcher

Nov. 2025 – Mar. 2026

at Intellicon Inc.

Researching Graph-RAG Tax AI Systems & Agentic AI

Researched and developed a Graph-RAG system for tax accountants. Designed and built entity ontologies and knowledge graphs to support rich retrieval across complex statutory, case law, and administrative interpretation data. Developed an agentic AI system to answer tax-related questions.

Intern

Sep. 2025 – Dec. 2025

Developing Chatbot AI Systems for GGGI

Developing a Retrieval-Augmented Generation (RAG) based Large Language Model (LLM) chatbot at the Global Green Growth Institute.

AI Scientist

Aug. 2024 – Nov. 2025

Developing Carbon AI System

Developing Retrieval-Augmented Generation (RAG) Large Language Models (LLMs) for climate, environmental, and urban applications at Newtonne Startup.

Researcher

Oct. 2023 – Feb. 2024

Research project with Patent Court of Korea.

Summarizing Precedents using Large Language Models

Summarizing judicial precedents using deep learning/LLMs to help judges understand cases more easily.

Research Intern

Jan. 2022 – Mar. 2023

Research intern at KAIST Visual AI Group under the supervision of Prof. Minhyuk Sung.

Tight Bounding Boxes for Shape Decomposition

After splitting 3D meshes into small partitions, we merge the partitions with a criterion that induces tight bounding boxes. Then, we refine the boxes using MCTS to tighten them by fixing errors. Check out the paper for more details.

Quant Researcher

Jun. 2022 – Oct. 2022

Quant research intern at Schperics Inc.

High-Frequency Trading Strategy using Order Book

Finding high-frequency trading strategies using deep learning with cryptocurrency order book data.

Research Intern

Jun. 2021 – Dec. 2021

Research intern at KAIST Vision and Learning Lab under the supervision of Prof. Seunghoon Hong.

Long Term Video Prediction

Solving the frame collapse problem when generating long-term videos. Based on SRVP, approaches like VQVAE, Temporal Abstraction, and Adversarial Training were explored to mitigate error accumulation in the latent vector, a common problem in auto-regressive models.

Awards, Honors

Surim Foundation Talent Scholarship

Fall 2024

Scholarship supported by the Surim Foundation to set an example for others by honoring a student who has made an outstanding achievement or significant contributions while enrolled in an undergraduate program.

Kiturami Foundation College of Engineering Scholarship

Fall 2024

Scholarship supported by the Kiturami Foundation for students in engineering fields. Selected as one of two recipients among all KAIST College of Engineering undergraduate students.

CoE Leadership Award, KAIST College of Engineering

Fall 2023

Awarded to top students who achieved high research accomplishments.

Dean's List, KAIST School of Computing

Fall 2022

Awarded to top students who achieved high academic accomplishments.

National Science & Technology Scholarship

Spring 2022

Scholarship supported by the Korean government for students in science & engineering fields.

Dean's List, KAIST School of Freshman

Fall 2020

Awarded to top students who achieved high academic achievements.

Hanseong SonJaeHan Scholarship (6th)

2019

Awarded to students with creative thinking and passion who show strong potential to receive a Nobel Prize.

Teaching

TA of Machine Learning for 3D Data (CS479)

Fall 2023

Mentored team projects on 3D deep learning for KAIST students.

TA of Modern Macroeconomic Theory and Dynamic Programming (HSS310)

Fall 2023

TA of Introduction to Programming (CS101)

Fall 2021, Spring 2024

Taught the basics of Python to KAIST students.

Tutor of KAIST Cyber Education for Gifted

Fall 2020

Taught the basics of C to elementary school students.

Background

During my undergraduate studies, my work with the KAIST Visual AI Group under the mentorship of Prof. Minhyuk Sung deepened my understanding of AI systems. Collaborating with Prof. Woojung Jon also broadened my perspective on law, society, and interdisciplinary research. This background now informs my approach to AI safety, combining technical understanding with legal inquiry. I envision a future in which AI is safely integrated into everyday life, helping build a more efficient society.

Skills

2020 ACM-ICPC Seoul Regional 12th place (C, C++)

Python, R, PyTorch, TensorFlow, L^AT_EX, MATLAB, SageMath, Scala, JavaScript, React, LangChain

Last updated on September 30, 2026
